Kämmer Positioners
Multifunctional Positioner
Multifunctional Positioner
Multifunctional Positioner

There are two designs with different hole patterns:
Fig. 4) with flanged solenoid valve
Fig. 5) with flanged I/P 2000 (Ex d)
Within these variations all modules as shown in Figs. 1, 2 and 3 can be retro-fitted at any time.

All positioners can be fitted with a pressure regulator to maintain the zero point adjustment when the supply pressure is unstable. This also allows connection to circuits with up to 10 bar air pressure.
Positioners supplied with a pressure regulator have a gauge to show the supply pressure. Positioners with I/P converter can be fitted with a gauge to show the outgoing pneumatic signal pressure.
