

TECHNICAL DATA

output:	max. 35 m³/h
delivery head:	max. 354 m (at 1450 rpm)
speed:	max. 1800 rpm
temperature:	max. 180°C high temperature on request
casing pressure:	PN 40
shaft sealing:	glandless due to magnetic coupling
flange connection:	DIN 2501 PN 40
sence of rotation:	anti-clockwise when seen on the pump from the drive

APPLICATION

AEH pumps are side channel pumps, are applied in order to handle problem-free and without any leakage and economically clear or turbid, aggressive, valuable toxic or ill-smelling liquids which do not contain any solid particles or abrasive components.

AEH pumps are applied in the chemical and petrochemical industry, in the pharmaceutical industry, in the plastic and rubber industry, in the surface finishing and hardening, in the food, beverage and tobacco industry.

CONSTRUCTION

Casing pressure:

Sizes 1200 to 6100: PN 40;

Please observe:

Casing pressure = zero head + inlet pressure
Test pressure 52 bar resp. 33 bar

Position of the branches:

Suction and discharge branches pointing radially upwards.

Flanges:

The flanges comply with DIN 2535 / PN 40
Flanges according to DIN 2512 with groove and bored to ANSI 150 or 300 as well as BS Table F is possible.

Hydraulic:

First hydraulics, designation of this construction type: A•

Bearing:

The pump shaft runs in two sleeve bearings of pure silicon carbide (SiC), lubricated by the pumping medium.
The remaining axial forces are absorbed by axial sleeve bearings.
Optionally available a friction reducing coating of the bushings to avoid critical operation.
The outer magnet is directly fixed on the motor shaft consequently the external bearing becomes unnecessary.
Designation of this construction type: •F

Shaft sealing:

Without shaft seals by an isolation shroud. Transmission of the driving moment by a magnetic coupling.

Designation of this construction type: see last page.

BAUART

Horizontal, selfpriming side channel pumps, handling entrained gas, of segmental type construction with open vane wheel impellers. The sealing to atmosphere is effected glandless by isolation shroud; the drive power is transmitted contactless by a magnetic coupling. The use of stable permanent magnetic material ensures the transmission of the nominal torque and given protection against overload..

On the basis of the compact close coupled design has been created a pumping unit that is easily to be installed. All IEC standard motors of the construction type IM B 35 are applicable. This design permits the operation of the pump without any additional coupling. Thus the alignment, a source of trouble, can be omitted.

The simple construction of the pump allows the assembly or disassembly without special tools.

Material design:

Pos.	Components	MATERIAL DESIGN						
		1A	1B	1F	4B	4F		
10.60 10.70 10.80 10.90 11.40 11.41	suction casing discharge casing intermediate piece	GGG 40.3 (0.7043)			1.4408

31.40 52.90 52.91 54.00 54.01	thrust bearing radial bearing radial bearing	SiC						
34.60	stool	GG 25 (0.6025) or 1.0570						
81.70	sealing shroud	Hastelloy C4 or ZrO ₂						
81.71	flange for can	1.0570						
84.71	internal magnet	1.4571/SmCo						
84.72	external magnet	1.0570/SmCo						
84.80	driving flange	1.0570						

Casing sealing:

The casing sealing is made by soft Teflon and O-ring PTFE. Designation of this construction type: 4

Drive:

By commercial three-phase A.C. motors, construction type IM B35. The selection is depending on the power consumption of the hydraulics, taking into consideration the density and viscosity of the pumping medium. For the motor rating the eddy current losses are to be added to the pump performance.

Motors controlled by frequency converters are admissible. The motors and magnetic couplings indicated in the delivery programme are selected for a mains frequency of max. 50 Hz and are applicable for watery liquids. In case of differing speeds other magnetic dipole moments are necessary for the couplings. It is recommendable to check the selection with Sterling SIHI.

Position:

Usually the pump units are installed horizontally. The operation with vertically installed pump units is possible, but should be made only in consultation with Sterling SIHI because of the special instructions for starting-up, the support and thermal load of the drive motor.

General remarks:

The following pump series with magnetic couplings are available:

Side channel pump with NPSH inducer stage:

Series **CEHB** with axial inlet and low NPSH

Volute casing pumps:

Series **CBMD** volute casing pump as per DIN EN 22858 bearing bracket design

Series **CBED** volute casing pump as per DIN EN 22858 close coupled construction

Series **ZLKD** volute casing pump close coupled construction - branches as per DIN 24255 / EN 733

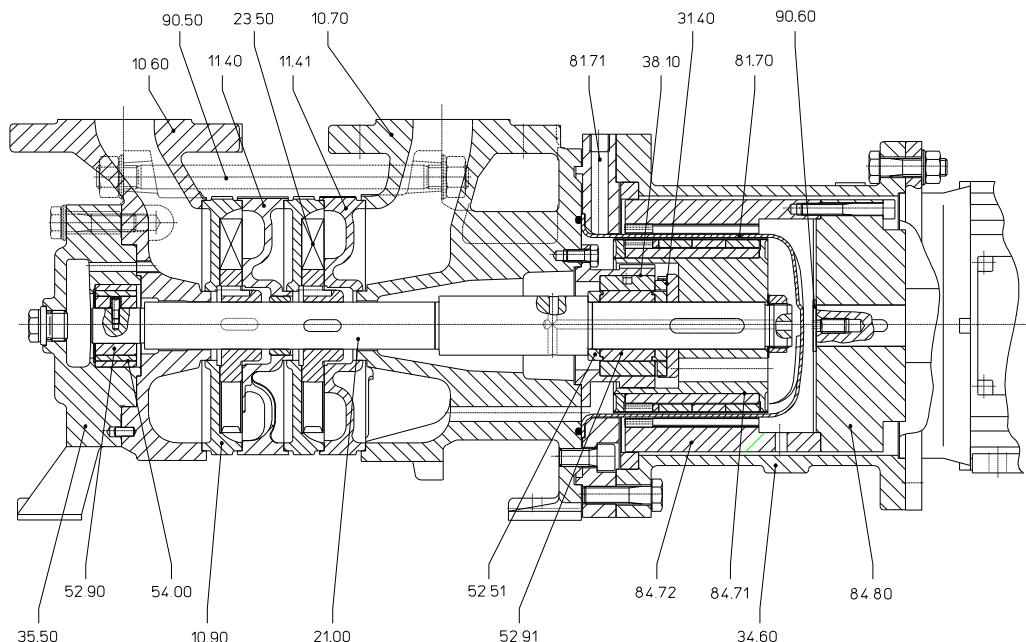

Series **ZLID** inline pump

For lower delivery heads:

Series **AKLA / AKVA** single-stage inline side channel pump

Technical documentation on these programmes is available on request.

FUNCTION

Partial flow:

For the cooling of the isolation shroud, heated up by eddy currents, a partial flow is derived which at the same time serves as lubricant for the ceramic sleeve bearings. The partial flow flows through two longitudinal bores in the discharge casing into the isolation shroud and is led back through the hollow bored shaft and the balance bores of the rear vane wheel impeller to its suction side. By the pumping capability of the inner magnet, inside the isolation shroud a circulation flow is created which flows through the longitudinal bores of the inner magnet towards the bottom of the isolation shroud and in the gap between inner magnet and isolation shroud back to the front side of the inner magnet. This circulation flow is nearly independent of the operating point of the pump. Consequently the cooling of the isolation shroud is guaranteed over the entire characteristic.

By the pumping capability of the lubricating grooves in the thrust bearing disk a further flow is created through the bearing gap of the radial bearing over the thrust bearing towards the longitudinal bores of the inner magnet. Thus, also independent of the operating point of the pump, the lubrication of the bearings is guaranteed.

Bearing:

The SiC bushings are clamped axially on the shaft. The material combination secures that the clamping power is maintained also in

case of high temperatures. The sleeve at suction side is secured on the shaft by a shoulder stud. TH stationary bearing inserts are screwed to the discharge casing or pressed into the bearing bracket casing. Alternatively bearings coated with adamantine carbon are available. Hereby are considerably reduced the coefficients of friction during dry operation and danger to the pump can be prevented. This coating is applicable up to 250°C.

Safety:

The magnetic bell is directly fixed on the motor shaft. The load on the bearings resulting from this is relatively slight and therefore a damage to the bearings very improbable. In order to protect the isolation shroud against internal or external damages by rotating parts, a stationary seat is installed in the stool and at the bearing insert. The distance from the rotors is smaller than that of the rotors from the isolation shroud.

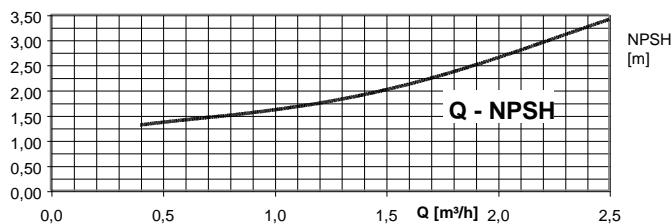

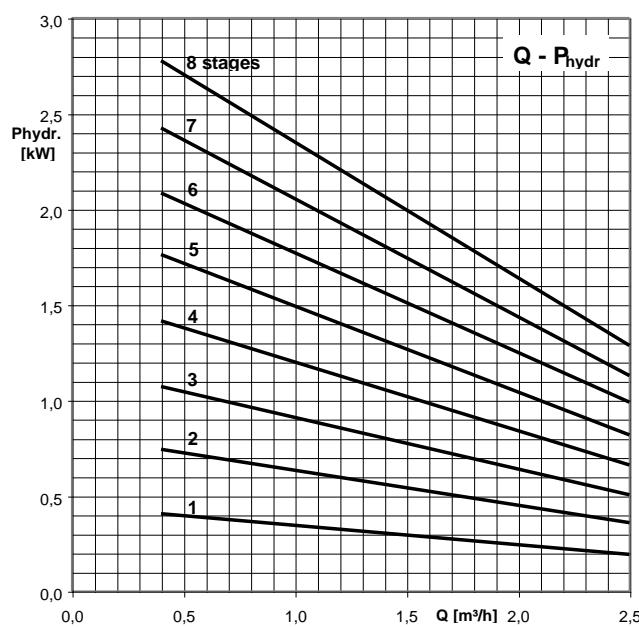

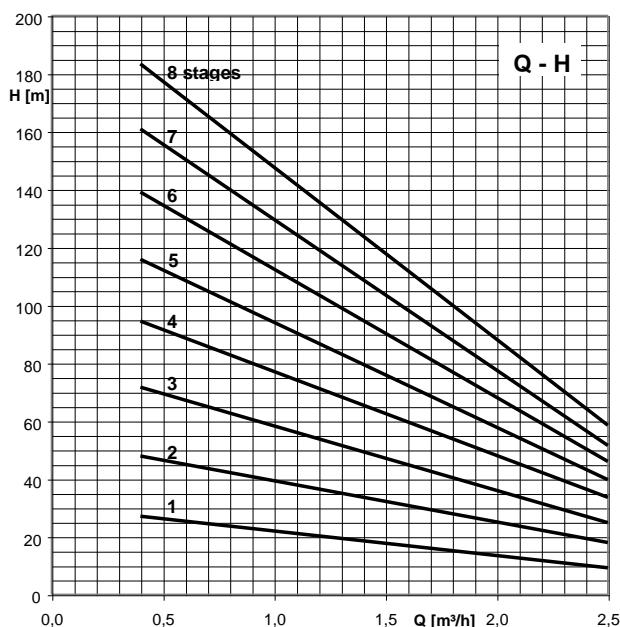

In order to obtain double leakproofness the application of fanless motors which withstand flooding, is possible. Then the sealed stool chamber serves to control the function of the isolation shroud.

The pump has to be run with a motor load detector. It protects the machine against dry operation and operation beyond the range of the characteristic curves.

VARIANTS

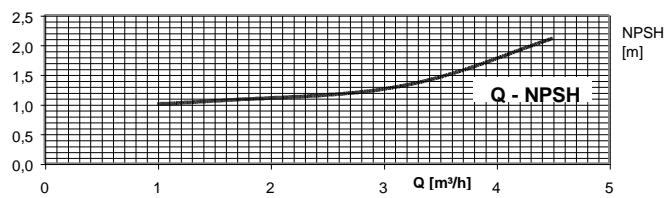

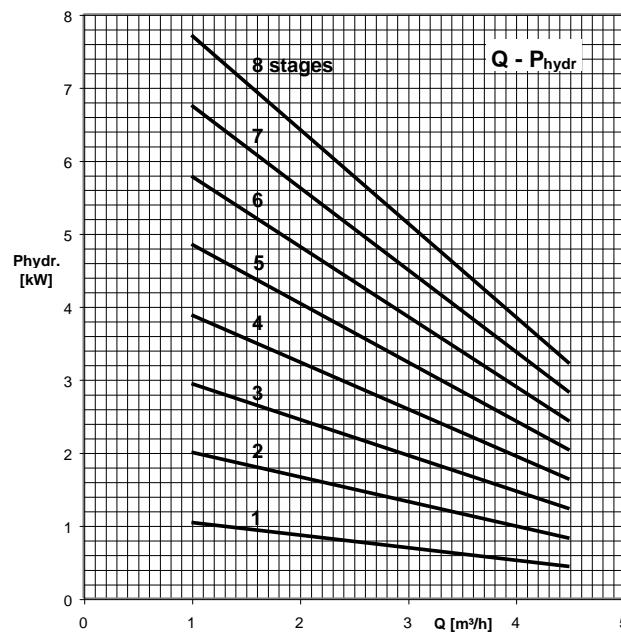

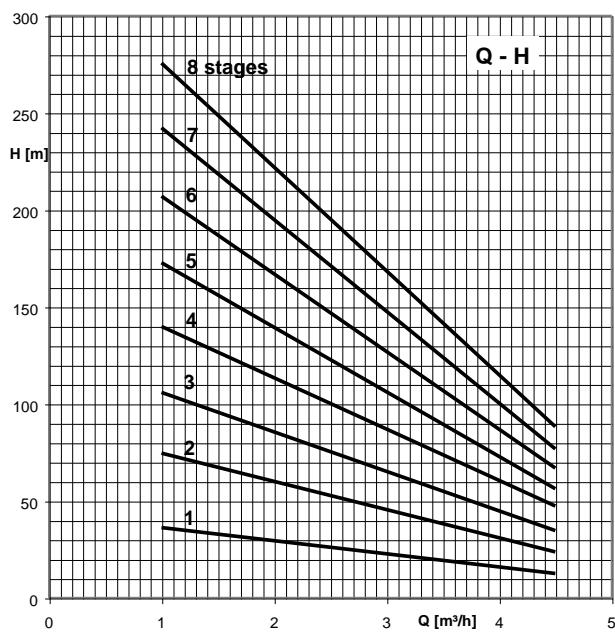

Pumps with heating or cooling chambers for the handling of smeltings or boiling media also are available. For such cases special heating stages, instead of normal stages, are installed in the pump and thus offering the heating or cooling by means of liquid or vapour.

Characteristic curves

AEH 1200 with magnetic coupling

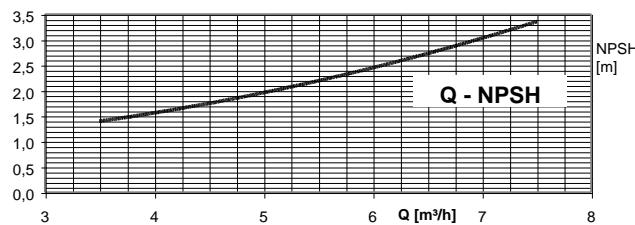

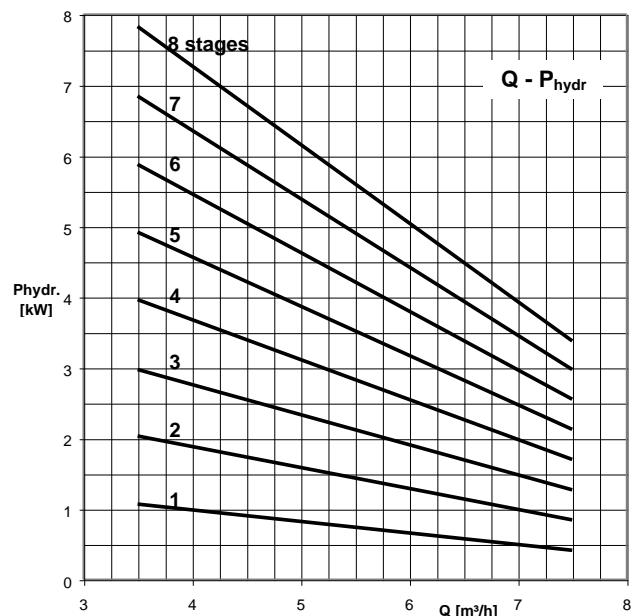

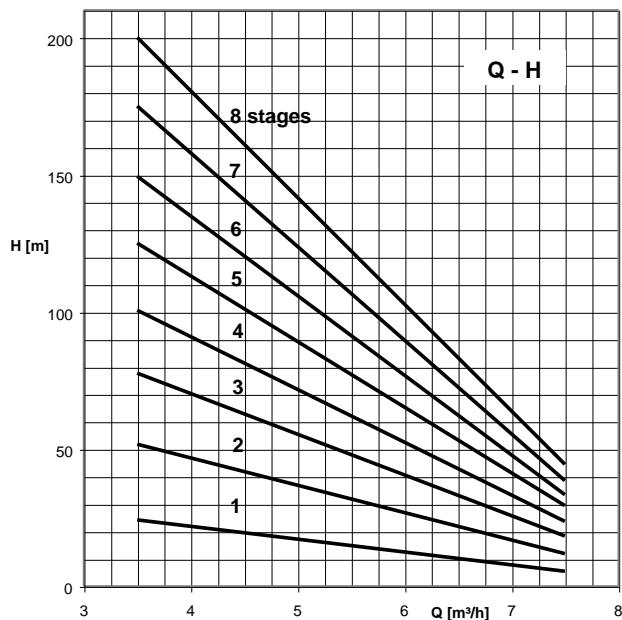

speed 1450 rpm, Visc.= 1 mm^2/s , spec. grav. = 1 kg/dm^3

AEH 3100 with magnetic coupling

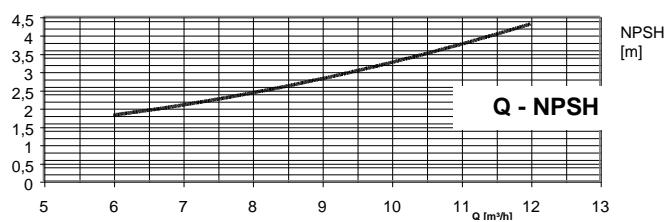

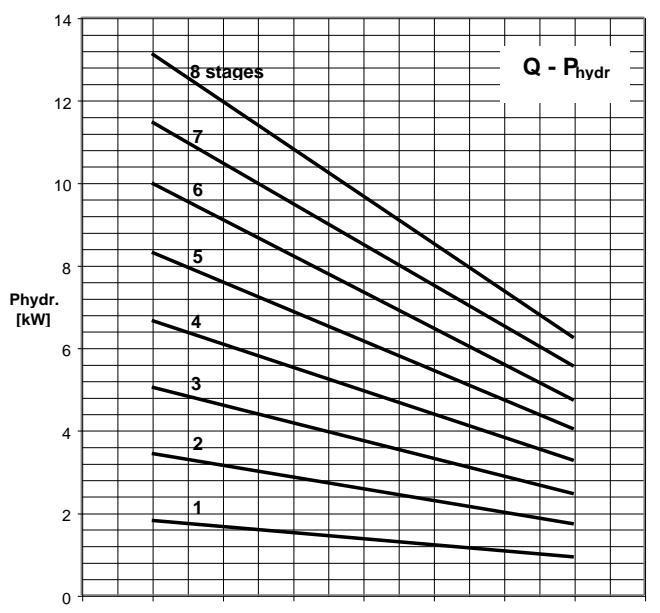

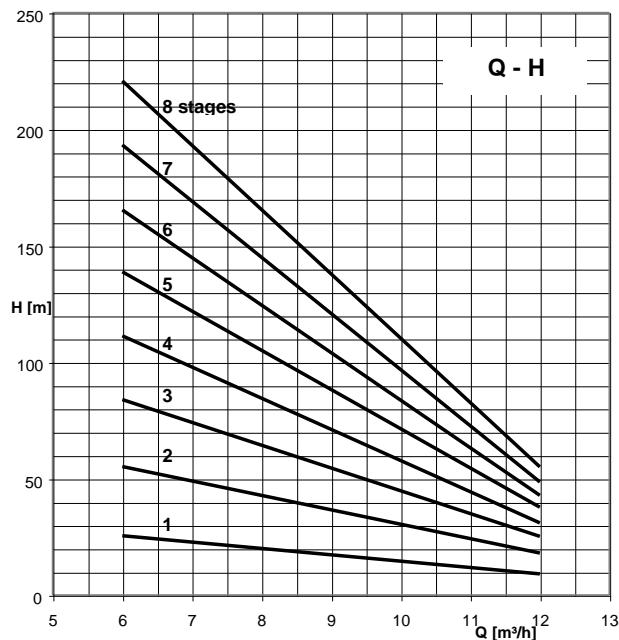

speed 1450 rpm, Visc. 1 mm^2/s , spec.grav. 1 kg/dm^3

Characteristic curves

AEH 3600 with magnetic coupling

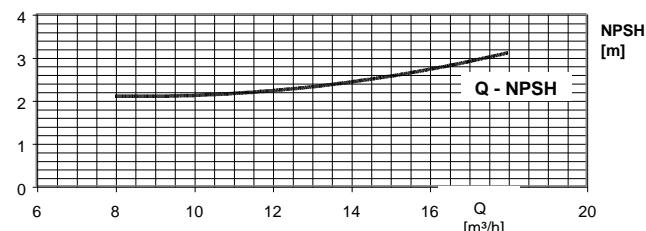

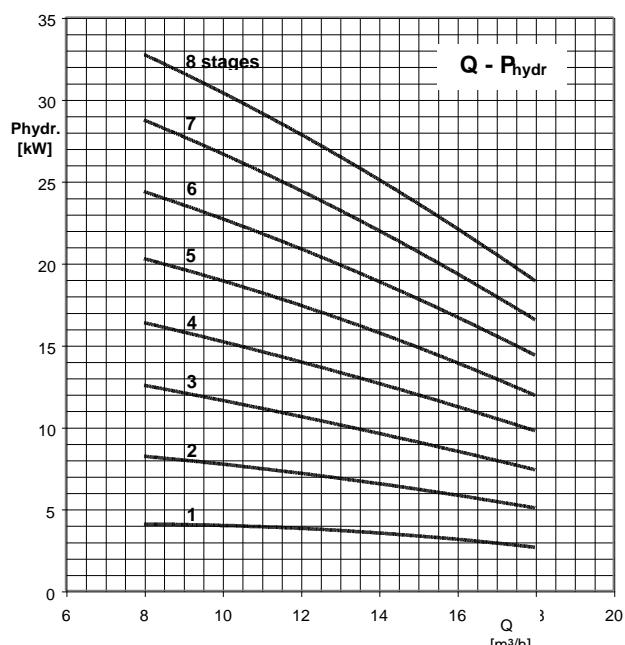

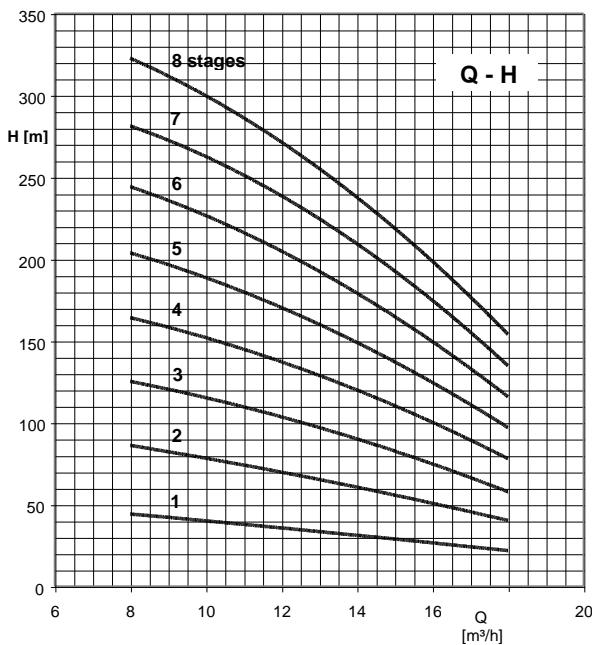

speed 1450 rpm, Visc. 1 mm^2/s , spec.grav. 1 kg/dm^3

AEH 4100 with magnetic coupling
